

# CV GENERATOR

Team IUT\_SynxERRORs

**Members:**

Zahin Raidah Maisha (170042032)

Nafisa Mehjabin (170042033)

Khandaker Rifah Tasnia (170042042)

# PROGRAMMING LANGUAGES AND SOFTWARES

- Programming Language : PHP
- Web designing Language : HTML, CSS, JavaScript
- Database Management System : MySQL
- Hosting : Xampp

## FEATURES

### **To be completed in this semester:**

- Several templates to choose from
- User-friendly UI design
- Download option in multiple formats (Word, PDF)
- Information stored safely
- Generate Cover letter along with CV
- Sections can be edited, added, deleted

### **Future plan:**

- Increasing the number of templates
- In future, the user will be able to create his/her own template
- Multiple CV and Cover letters can be generated using one account
- Rate and review option for users
- Keep track of CVs and efficiency rates

# TIMELINE

- DECEMBER – JANUARY : Team formation and Idea Development
- JANUARY - FEBRUARY : User Interface Design and Schema Design
- FEBRUARY – MARCH : Web page design
- MARCH – APRIL : Database management and linking database with our web page
- APRIL – MAY : Development and merging our project.

## UI MOCKUP

We have attached a PDF “Mock Up UI of CV Generator.pdf” with this document, which has the demonstration of our UI design.

The first page shows the home page of the web application. Any visitor to our site will land in this page first. The visitor can scroll down to the sub-page which is shown in the second page. There will be an opt-in bar from where visitor can choose between ‘Login’ or ‘Create account’ option.

Page three and four shows ‘Login’ and ‘Create account’ tabs consecutively.

Page five shows the dashboard from where a new user can start with ‘Create new cv’. Previous user can edit information of his existing CV in his profile. There’s an option for creating cover letter as well.

The next consecutive pages show how to create a CV or edit step by step.

There are two types of editing option. Basic editor and Visual Editor. In page six, the visual editor tab is shown. In the visual editor tab user can choose templates and edit its appearances like color of the template.

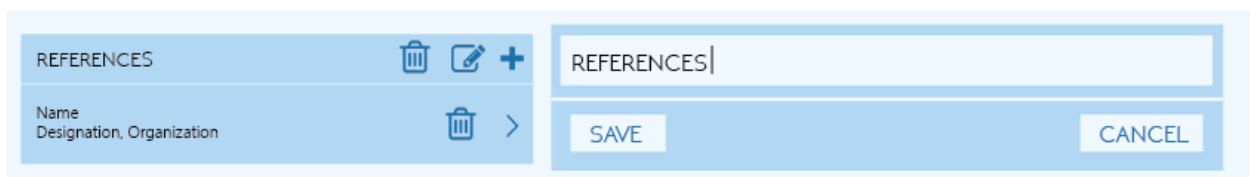

In page seven and eight the basic editor tab is shown. It’s a drop down page with different section for different types of information.

The next pages are showing the different tabs that will pop up where user can give input of their necessary info like personal info, education, work experience, skills, language etc.

There's option for deleting the whole section or to delete an input separately. User can add more inputs of info as well using the add button.

Users can edit the name of the section using the edit button like shown in the picture.

There is a 'Add more section' option where user can create new section.

After the editing is done user can preview his CV in the format of his desired template. Lastly user will be provided the option to download the CV as doc or pdf format and can share his CV.

## WHY DO WE NEED CV GENERATOR?

Creating a CV is quite a hard job, and in most cases we end up forgetting about some important details that might add a lot of weight to our CV. With CV generator and all its organized segments the job becomes much easier. When we have created the UI of this CV, we've taken ideas from multiple websites, and integrated them with our unique ideas. This why we believe that our application upon completion can be one of the best CV generators found online.

So, in conclusion, our hope is to properly implement our ideas and create an app that can open the door for qualified to good jobs.
